
Train on errors made by a fresh random half of previous members
Held-out loss: matched primary trajectories
Mean p-adic loss (lower is better)
Ensemble members (log scale)
Random half-reference
All-previous errors
Independent full-data fits
124 members
observed minimum
Whole taxonomy-path accuracy
Held-out exact accuracy (%)
Training errors and sampled-reference fit sizes
Training rows (%)
Rows used for new half-reference fit
Starting-order and sampling sensitivity
Held-out mean p-adic loss
Half-reference, order 0
Independent, order 0
Half-reference, order 9
Independent, order 9
Half-reference, order 18
Independent, order 18
